# VCare<sup>®</sup> Plus and VCare<sup>®</sup> DX Plus

New and enhanced VCare<sup>®</sup> uterine manipulator helps you deliver an even better surgical experience.

- Provides superior exposure and access to pelvic cavity
- Delineates vaginal fornices for easy identification of colpotomy plane
- Maintains pneumoperitoneum throughout the procedure

## Guide Ridge

Bright green cup with guide ridge helps define the precise incision landmark for colpotomy

## Natural Curved Shaft

Conforms to the patient's anatomy for easier insertion and better exposure

## Optimized Distal Cup Design

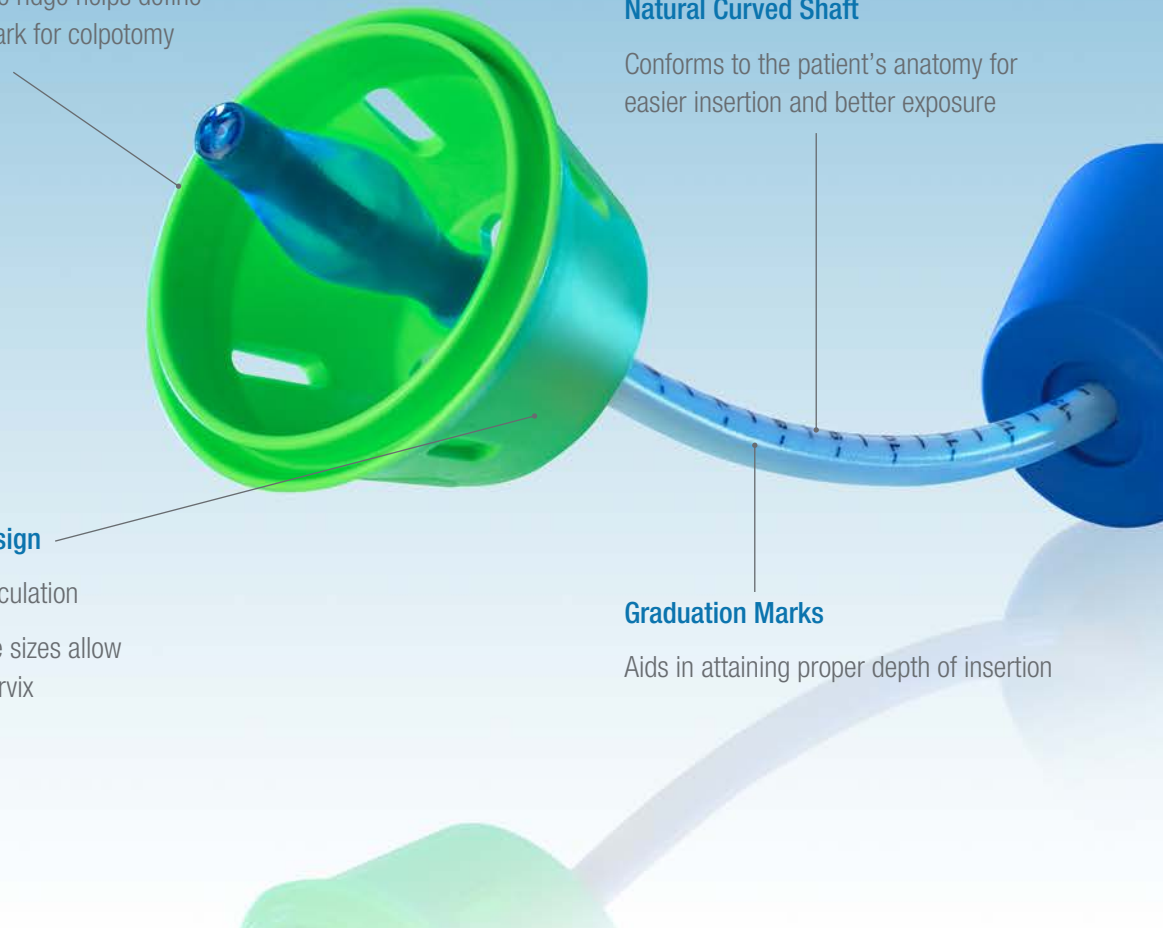

Enhanced mobility and articulation

Cup geometry and multiple sizes allow for better seating of the cervix

Harmonic compatible

## Graduation Marks

Aids in attaining proper depth of insertion

### Proximal Occluder

Back cup locks its position to secure the forward cup and prevents loss of pneumoperitoneum

### Ergonomic Handle

Improved control for better manipulation and access to key surgical targets

A more comfortable hand position to reduce fatigue

**NEW**

### Easy To Use

One-piece, fully assembled device reduces time required for assembly.

Eliminates cost associated with additional components, repair, sterilization, or lost parts.

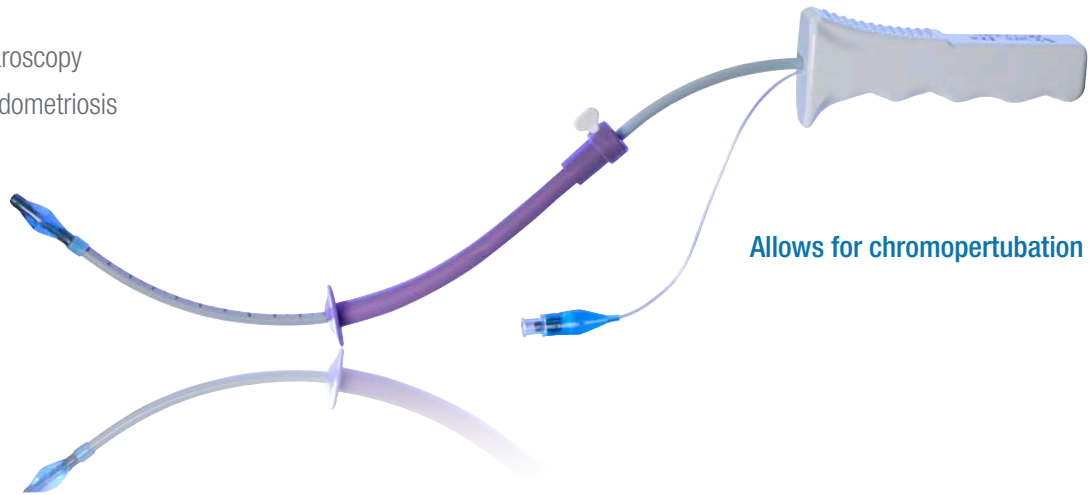

### Additional Benefits

Allows for suturing of the cup for improved stability of the uterus.

10cc inflatable balloon reduces risk of uterine perforation by anchoring the uterus and stabilizing the shaft within the uterine cavity.

**VCare® DX Plus** provides excellent control of the uterus without distention of vaginal fornices. Ideal for:

- Tubal Ligation
- Myomectomies
- Diagnostic Laparoscopy
- Treatment of Endometriosis

## Ordering Information
